PREFACE.

IN issuing this, our complete catalogue of our goods, great pains have been taken to illustrate the best methods of Ventilation and Drainage, and also to meet the wants of every class or design of stable, from the cheapest to the most elaborate. We have omitted many cuts of goods which have been published by other manufacturers (which have no place in modern stables), with the design of making ours as compact as possible.

Our factory has been newly equipped with the best machinery for doing all kinds of Ornamental Wrought Iron and Copper work, and we claim, in our special lines, to stand at the head.

At our New Store, No. 19 Portland Street, can be seen a number of Modern Horse Stalls fitted with our latest improved fixtures, which we shall be pleased to show to any who may favor us with a call. Experienced men will be sent to receive instructions, to give practical information and take orders.

It will be our endeavor to ship all goods with promptness and despatch, and careful attention will be given to obtaining the lowest freight rates.

We make our grateful acknowledgements to our customers and friends for past favors, and trust to merit their future patronage.

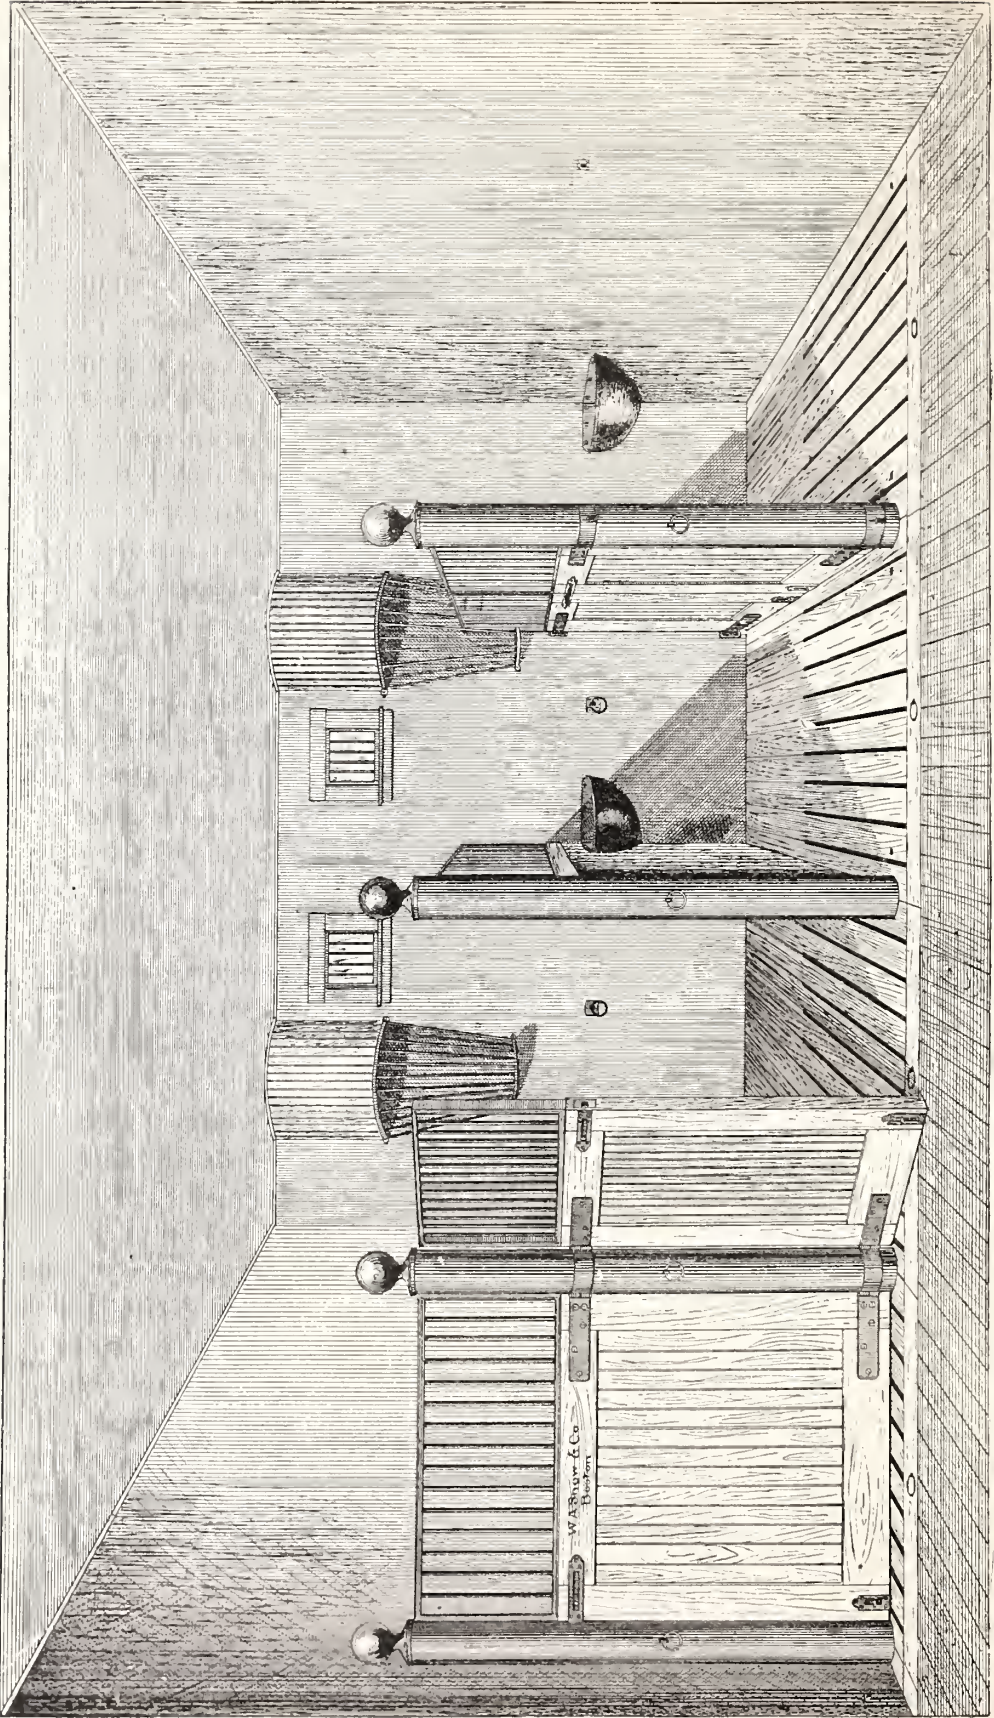

Respectfully,

W. A. SNOW & CO.

W. A. SNOW.

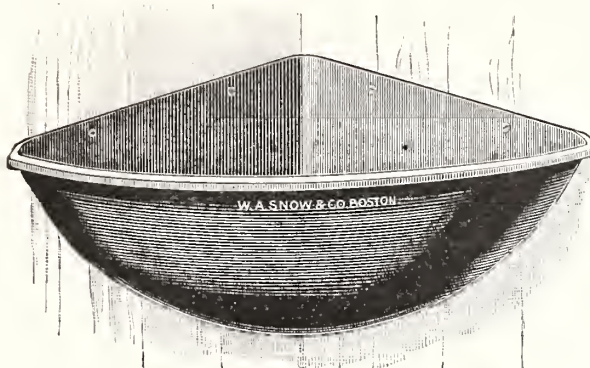

A. H. RICHARDS.

A. W. CLARK.

Length on side 17 inches; depth 10 inches.

Price each, \$4.00

THE BEST ON EARTH.

Smith's Perfection Corner Manger.

Size 17 x 17 x 6½ deep.

Patented April 5, 1892.

At a glance you see a horse cannot plow the feed out of the manger, and it cannot overcharge its mouth, thereby wasting quantities of feed and swallowing a big per cent. of it unmasticated. It obliges the animal to munch around, getting only a little at a time. In the act of doing this, it is necessarily masticating whatever it has in its mouth. This assures it a great conditioner and saver of feed.

This manger can be easily cleaned, and being supplied with round balls at the bottom, there is no danger of the horse breaking his teeth.

TRY ONE. If it does not do all claimed for it, return it and get your money.

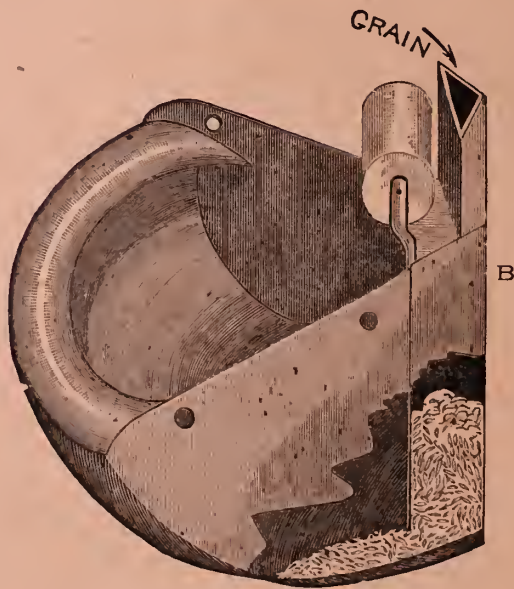

Price, \$1.50

Breeders and owners of fine horses are especially invited to examine this manger.

“THE YORK.”

Price Each, Complete, \$4.00

ECONOMY AND HEALTH.

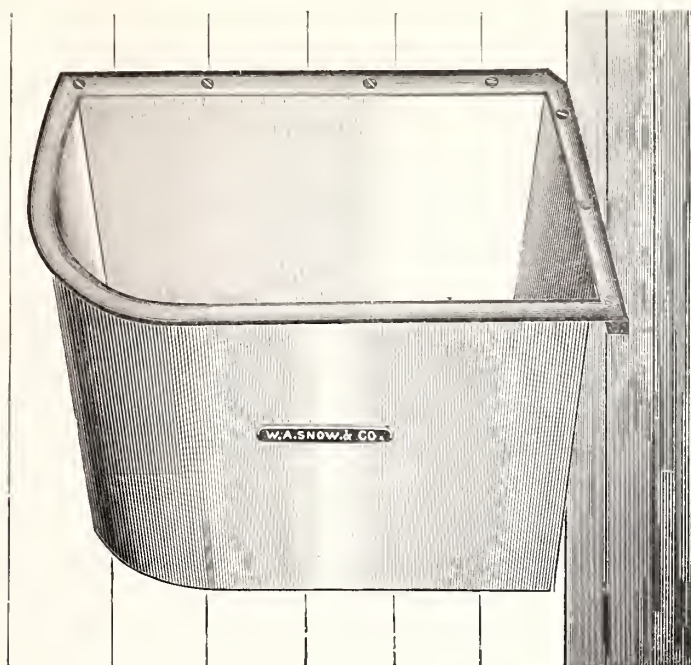

Why our York is the best Corner Manger in the market:

It has a wide rolling food-guard in front and corners, which prevents scattering the grain.

The roll of compressed salt attached, is acknowledged by all to be the neatest and most economical form of salting stock.

The improved grain reservoir, as shown by fig. “B,” which regulates the flow of grain, ensures perfect digestion.

CORNER MANGER. (Extra Heavy.)

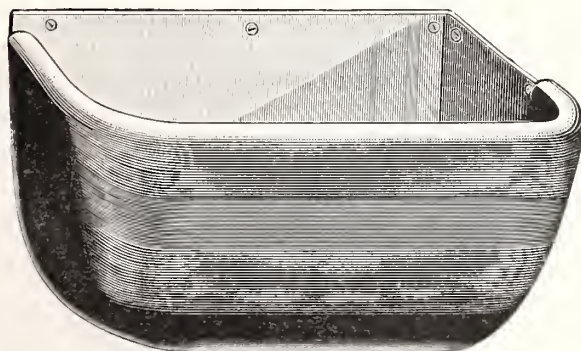

No. 7 "B."

Length on side 17 inches; depth 11½ inches.

Price, \$3.50

RIGHT AND LEFT CORNER MANGER.

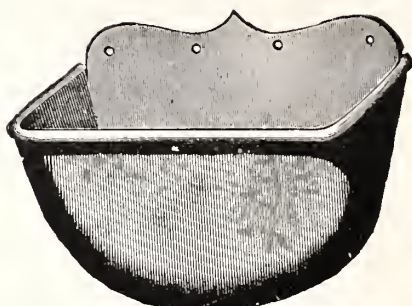

No. 8 "B."

Snow's Iron Stall Floor.

This cut shows a modern Stall with No. 47 "B" Stall Floor with No. 55 "B" Graded Gutter and Cover. This method of drainage we consider the best in use to-day. For prices of the different sizes see page 32.

CLARK'S ELASTIC CEMENT.

For Leaky Roofs, Chimneys, Gutters, Skylights and Stable Floors, it is acknowledged to be far superior to all other Cements. As it is composed of pure Linseed Oil and neutral substances, it will remain elastic for years.

For general use on all Wood and Iron work, or for pointing stone and bedding slate, it has no equal.

Put up in 5, 6 1-4 and 12 1-2 lbs. tin pails, also in kegs of 25, 50, 75 and 100 lbs.

PRICE \$5.00 PER 100 POUNDS.

BUTTS' Buggy Washing Device.

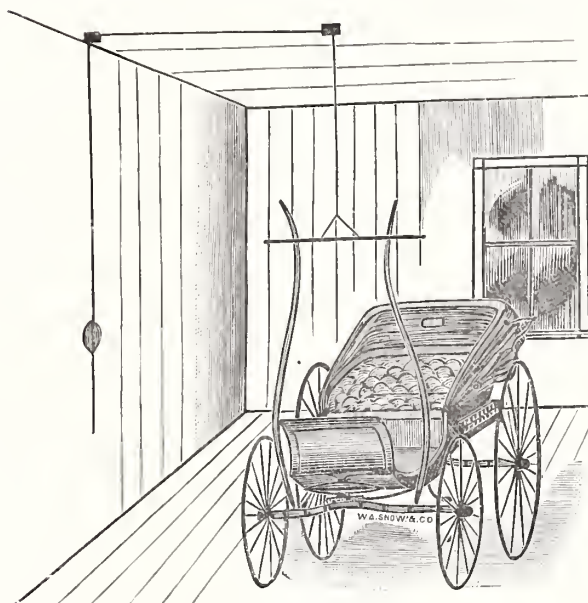

PATENTED DEC. 10th, 1889.

All Infringements found in use will be Prosecuted.

This Invention has been thoroughly tested and is intended to lessen the labor of cleaning Buggies, Carriages, Wagons, or in fact any kind of Vehicle, at the same time saving the wear of hose, by enabling the washer to do at least one-third more work in a given time. It is extremely simple in construction and can be adjusted to any hydrant. The parts are all of iron or brass and cannot get out of repair. It can be arranged to fit any stable or wash-room, and be entirely out of the way.

NEWTON'S IMPROVED ANIMAL TIE.

No. 222 "B."

Represented in the cut above, is no longer an experiment but has been tested and adopted by hundreds of the best breeders and dairymen in the country.

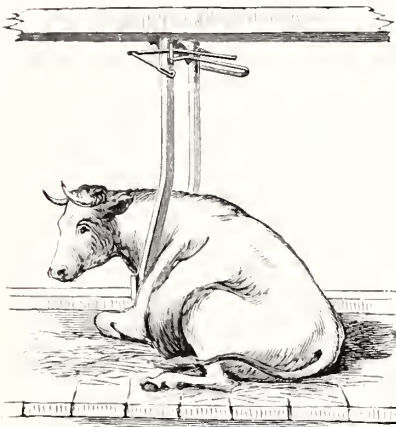

The Tie is made of wood and bent in the shape of a bail or three sides of a square, provided with a swivel that is fastened in the centre by two iron pins, and made so that one part turns with the neck piece, and the other part revolves around the wooden Tie, making it impossible for the animal to get it twisted. The ends of the wooden Tie are riveted so that they will not split where the bolts go through that fasten it to the manger. It is *Humane*, while it holds them firmly; it gives them perfect freedom of their heads; they can turn and

lick their sides and flanks with perfect ease; they can reach any part of the manger and do not waste their feed; it will keep the cows cleaner than any other mode of fastening, because it pushes them back when standing, and draws them forward when lying down. It can be put up with an alley in front of mangers, or against the side of barn, as you choose. To dairymen and farmers: I believe your cows will pay for the Ties in two seasons, in the amount of milk they will give more than they would confined in stanchions of any kind. To breeders of fine cattle: It keeps them cleaner and shows them to better advantage than any other mode of fastening.

Price, \$2.50 each.

To Make Gilt-Edge Butter, use the

PRESCOTT & MANN CATTLE STANCHION.

No. 223 "B."

The superiority of this Stanchion over all other methods of fastening cattle, more particularly milch cows while in the barn, is beyond question. It is strong, simple, not liable to get out of order, and can be depended upon at all times to keep secure, clean and comfortable any animal entrusted to its care. It is quickly and easily opened and automatically locked by closing.

This Stanchion consists of two parallel bars, one of which is movable, properly connected by cross pieces and turning freely on pivots at top and bottom.

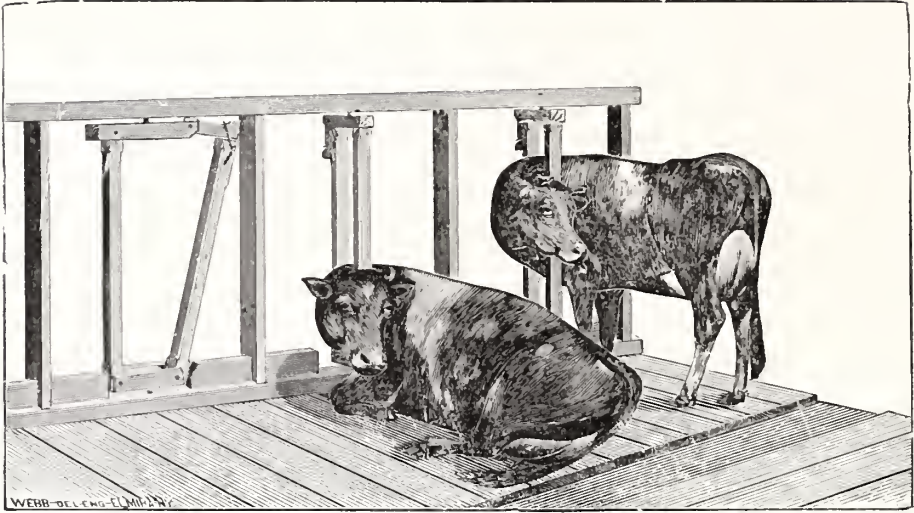

At the height of 30 inches from the floor the bars curve backward so that when the cow is standing, this upper part of the Stanchion is opposite her shoulder, thus keeping her back with her hind feet near the edge of the platform on which she stands. When lying down, the lower part of the bars allow her to move forward as she naturally desires to, giving her five inches more available floor space than she has when standing, thus allowing her to lie comfortably, with her hind quarters fully supported on a clean, dry floor: the turning of the Stanchion admits of an easy and natural position of the head at all times.

By thus providing for the neatness and comfort of the cow, an increased product is assured and a correspondingly greater profit to the owner.

Its materials and workmanship are the best, and it can be easily set up by any one who can use the simplest tools.

Price each, \$2.75

SMITH'S SELF-ADJUSTING SWING CATTLE STANCHION.

EASE, COMFORT and THRIFT.

No. 224 "B."

Price each, \$1.75.

Most practical, useful, cheapest and best fastening invented!

Adjusts itself, when open, so that the animal cannot turn it when backing out, and locks itself when closed.

We claim this invention gives perfect freedom to cattle,

In turning the head to either side, thus enabling them to lick the sides and shoulders, drive off flies or lie down, resting the head upon the body as nature directs and requires.

That by using this fastening the cattle keep cleaner than by other modes of fastening.

They cannot lie down in their droppings as when fastened with ropes or chains, cannot get caught by their head or horns in any way. They are a perfectly safe fastening, and the cattle are quicker and easier fastened or unfastened than with ropes or chains.

They are strong and durable, and not liable to get out of order.

The Stanchions are made of hard wood timber, well oiled.

They turn on pivots in the centre of the top and bottom. (The pivots are two-inch oak pins, furnished with the stanchions).The upright, or side pieces, are $1\frac{3}{4}$ or $2\frac{3}{4}$ inches, with edges rounded, the top and bottom, or cross pieces, are 3 by 4 inches. With the latch and clevis they are self-adjusting when being opened and closed.

✂ In opening, the end of the latch turns up into a shallow mortise cut in the under side of the top stringer, and they stand adjusted as shown in right hand of cut.

To open them, raise the clevis and press out on the side piece, when opened they adjust themselves, ready for the animal, and cannot be turned until closed.

✂ In turning the head to either side, the side of the Stanchion turns back toward the body, the neck turns round naturally, and the head rests upon the body with ease.

To close them, you simply press in on the side piece, when they adjust and lock themselves.

✂ **When closed, the cattle cannot unlock them in any way.**

We make them: Five inch neck space for Calves, six inch for yearlings; Six and six and one-half inch for cows: Seven and eight inch for steers: Nine and ten inch for bulls and oxen. Made extra strong.

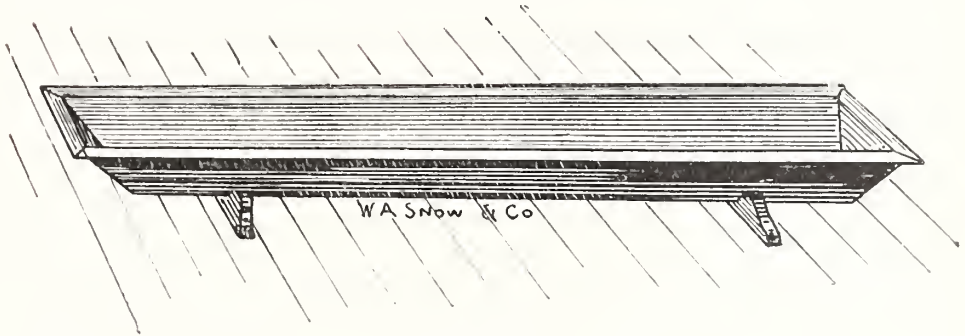

Usually send six and one-half inch unless otherwise ordered.

They are made:—

4 feet 4 inches, 4 feet 6 inches, and (for large cattle) 4 feet 8 inches long, to be placed on 4 inch bed piece, making them, when put up, 4 feet 8 inches, 4 feet 10 inches, and 5 feet high.

They can be put up in three foot space, or a wider space can be used.

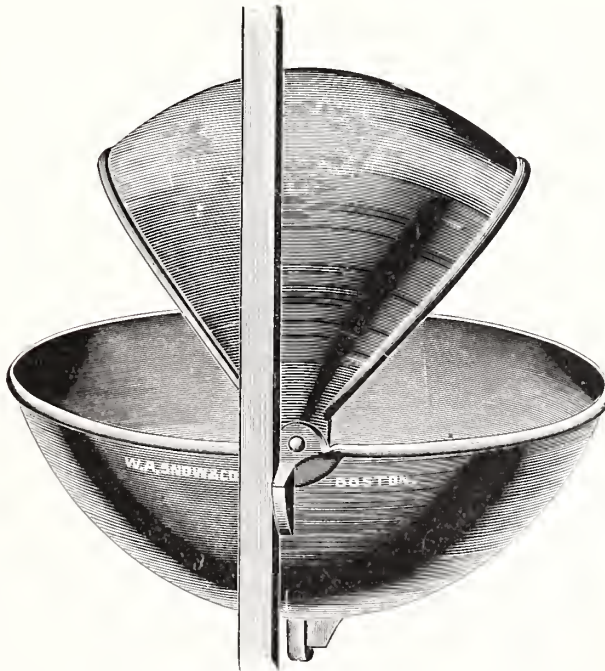

PIG TROUGHS.

THE FOREST RESERVOIR VASE, with Sub-Base.

No. 332 "B."

PAINTED ONE COAT.

No. o Vase,	Height.	Diam.	Reduced Price.
.	16 inch.	15½ inch.	\$3.00
" o " and Base,	20½ "	15½ "	3.75
" I "	20 "	19 "	4.00
" I " and Base,	26 "	19 "	5.25

Our Improved Forest Reservoir Vase is superior to any manufactured, for the reason that when filled the earth will hold the moisture longer, thus giving a better growth to plants than they can receive in any other Vase.

The roots of the plants cannot rot as they do in the old pattern reservoir vase, with an iron strainer.

DIRECTIONS.—Before filling the vase with earth, pack the bottom of the vase with small stones or broken earthenware to the top of the pipe.
